Headline: SRL Academy Students Lead the Nation in 2010 Terra Nova Standardized Testing

SRL Academy, a private, co-educational, Roman Catholic Elementary school located in Short Hills, New Jersey, today reported that its students again this year led the nation in the 2010 Terra Nova standardized testing. Top results were achieved across the entire Academy, with every grade significantly outpacing their diocesan and national counterparts. Overall, 93 percent of students in the Academy scored in top 25 percent of the nation. Moreover, 73 percent of students scored in the top 10 percent of the nation. Every grade excelled in every subject, with certain grades having virtually all students scoring in the top 10 percent of the nation.

"SRL Academy delivers academic excellence, and this is just yet another data point underpinning that fact," said Diane Pollak, the Academy's Principal. "I've been at SRL Academy a little over a year now, and each day I witness something special that sets our school apart from its peers and underscores its 140+ year tradition of delivering academic excellence. It's no wonder that an institution with a nationally recognized, award winning teaching staff, produces outstanding students that rank among the top in the nation academically," said Pollak. This year, SRL Academy was the recipient of the national 'Innovation in Education' award, in recognition of the Academy's advancements and innovation in science facilitated by technology. The award honored the science program headed by Christina Wage, which features a curriculum that uses advanced technologies to deliver a global education through a 'borderless classroom.' The 'Innovation in Education' award is a national award, issued annually to twelve schools across the country. Moreover, SRL Academy received this award previously, making it one of the few schools in the country to receive this prestigious award twice.

"The nationally recognized, award winning academic program offered at SRL Academy is second to none, and I look forward to continuing to advance our Academy in the years to come," concluded Pollak.
